

smart padlock

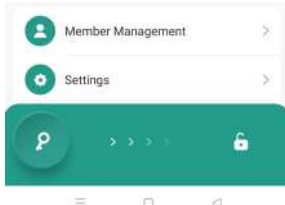

1. Thank you for choosing a smart padlock from us. Before using this product, make sure to pull off the plastic film in the battery cover to power the product.
2. Scan the following QR Code to download “Tuya Smart” App
3. Turn on the Bluetooth of the phone, login in the App and grant the access to the Bluetooth to the App by clicking “Me”, then clicking “Setting” icon at the top right corner and then clicking “Privacy Settings”.
4. Press “Fingerprint recognition area” in the padlock to wake it up and then you can add it by clicking the “Add Device” as follows

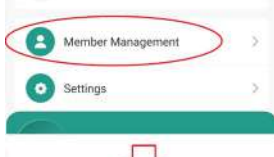

5. Enter into the main page of the smart padlock, you can unlock it by sliding the Key icon at the bottom from the left to the position of Lock icon.

Attention: If the Bluetooth is disconnected, please place your finger on the fingerprint area to wake up the smart padlock and then click the “Tap to connect the device” to connect the Bluetooth of the device.

6. Add Fingerprints: Click “Member Management”-Click “Me” and follow up the guide in the App to place your finger on the fingerprint reading area five time to add this fingerprint.

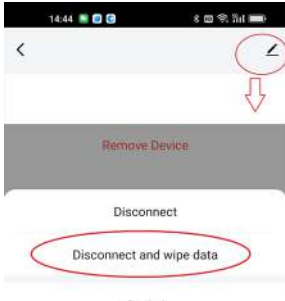

7. Share unlock permissions

Click “Temporary”- Click in the upper right corner “+” to set up the temporary unlocking sharing. Click “Share” to share this with visitors.

Attention: Please make sure the visitor’s account is registered in the same App and the account information is right.

8. Resetting: Click the edit icon at the top right corner of the main page, click “Remove the device” and then click “Disconnect and wipe data” to reset the smart padlock.
- Attention: Make sure to connect the smart padlock, so that you can wipe all data when you remove it. If the smart padlock is not connected, then you are only able to remove it but can’t wipe data. If data is not deleted, all registered fingerprints can still unlock the smart padlock.

ATTENTION:

1. Make sure to press “Fingerprint recognition area” in the padlock to wake it up so that it can be connected by the App.
2. If you press the Fingerprint and fail to unlock the Smart Padlock, but you can unlock it after few attempt, this means batteries are in low level, please replace batteries right away by following up photos as follows:

Use slotted screwdriver to open the cell lid

Anode face up and cathode face down
