Size

Operation

(It's suggested to mainly use Tuya APP)

● Reset the lock

After you long press the setting button, there will be 2 short beeps first, and then there are 5 short beeps in 5s. When it stops beeping, release the setting button and now there's a long beep. After 1s there's another long beep again. Then the device is successfully initialized.

● Add card

Press the setting button, there are 2 short beeps first, when it beeps the 3rd time please release the button immediately, then there is a "dorui" sound, now you may swipe the card.

Successful: There is a long beep, and then a "dorui" sound again, now you are able to add more cards.

Failure: There are 5 short beeps, and then there is a "dorui" sound for you to swipe card.

Note: If there's no operation within 10s, it will exit the adding process. Or within 10s you may short press the setting button to exit, there will be 2 short beeps.

● Turn on Bluetooth

At factory default mode, swipe any card and there are 2 short beeps first, please do not remove the card until there is a long beep. Now the Bluetooth function is enabled, you may use APP to add the lock.

1. If the lock has already been bound with the APP, you don't need to enable the Bluetooth again.

2. After any card is added in the device, the Bluetooth is turned on automatically and you may add the device in the APP.
